To the Reader.

IO satisfy all Persons that they are not badly impaid upon or abused with a Counterfeit or Surreptitious Copy, it will be necessary (and doubtless expedient) that some Account should be given of this Almanack, so let the World know, that though the worthy Author be now Dead, yet 'twas compos'd by his order and Directions. It is well known that the Famous Mr Lilly (the English Merlin) was a Person of very great Experience and did (to good purpose) practise many Years the Art of Astrology, being the only publick man in this Nation. He has ('tis true) been reported a Dead man several years; But not till the Age of Seventy nine years 5 weeks and 4 days, he departed this Life, viz. June the 9-1681. and his Body now lyes interr'd in the Church of Walton upon Thames in the County of Surrey. He left ready compos'd in a fit method, some very considerable Predictions and Astrological Judgments for several years to come, with many secrets in ART not known to the vulgar Astrologer. In the Month of May last, (viz. the Whitson-week) I was at his House to make him a visit according to my usual Custom, and then he gave me Order and Direction to compleat this Anglicus for the year 1682; which according to the Authors desire, is intended to be continued for future years, from his own Notes and Papers now in my Custody (as some worthy Persons and intimate friends of Mr Lilly's, and in particular my Honoured friend and Patron the eminently Learned Elias Ashmole Esq; can testify;) And this (amongst many other Civilities) he promised me long before his Death, and hath employ'd me as his constant Amanuensis for seven years and upwards last past as he himself has been pleas'd to acknowledge and signify in his Annual Books—

Many have been the continued favours I have received from this worthy Author, and to testify his great kindness; he was pleas'd long since not only voluntarily to adopt me his Son, but elect me Merlinus Junior also, and appointed me, and no other Person, to continue his work, which for about 36 years (with great

To the Reader.

a applause in the general) he has endeavour'd to oblige the world without the least Ostentation—but affirm that what is here declared is really true, and I hope this work will be as kindly accepted as those his Annual Books I have already presented — Here I have given some Account of the motion and Progress of the late dreadful Comet with brief Remarks of its effects which we may in all probability (I fear) be too sensible of within these few years. I have also endeavour'd to satisfy the inquisitive Reader (at least in part) what the portents of the next triple Conjunction of Saturn and Jupiter in Leo may be (of which a whole volume might be written) with many other Considerations and Observations deduced from the Configurations of the Heavenly Bodies according to Art. To conclude, I think there are no rational Persons will deny that the Heavenly or Aereal Prodigies are oftentimes the Messengers or Ambassadors of misery and calamity unto mankind. Or that any thing is done according to the Course of nature which is not either the cause or the sign of something that follows—So that where there is Order, there is place for prediction — But we all believe that the Motions of the Stars and their influences are acted by the command of an eternal Decree; if so there is no resisting the Decrees of Heaven—and certainly nothing more difficult than to predict future events — or interpret what those decrees are: For though God doth nothing contrary to the Order of second causes, yet he hath an over-ruling power and is not tyed to one way or manner of working — Hence then one cause depends upon another, and the course of all things publick and private is only a long connexion of Providential appointments—These things considered the Astrologer ought not to be blamed if he doth not always exactly hit the white, and thus disring your candid censure, I remain,

Gentlemen,

Sept. 20th 1681.

Your Faithful Servant

HENRY COLET,

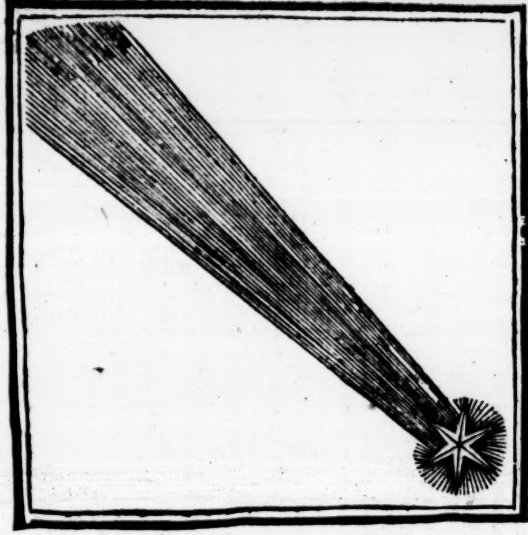

Student in the Mathematicks, and Astrology.

Astrological Judgments

For the Year 1682.

By *William Lilly* Student in Astrology.

Stella Crinita at apparuit *Anglia*, December 1680.

Before

Astrological Judgments

BEfore we deliver our Astrological Judgment of the Contingencies of this present year 1682, it will be necessary to say something of the late prodigious *Comet* which was seen all over *Europe* the latter part of the last year: and it will be expected from us that we should give our Opinion of the effects thereof. We have not yet received any certain account in what Sign of the *Zodiack* it first appeared, some say it was first seen in the Sign *virgo*, others Report in the Sign *Libra*, But this we are assured it was first visible at *London*, and several (if not most) places in *England* and some Countries adjacent in *December* in the Sign *Capricorn*, near unto the *Sun*, and it presented it self in that form, as before is express.

1. It was seen near *Bristol* *December* the tenth being *Friday* night, but without any Body or likeness of a *Star* at the end of it, seeming to issue from the *Sun* on *Saturday* night *December* 11, and appear'd broader at the Bottom, and so Cone-like arising to a point a little on the North side the *Eagles* heart, and the point ceased near the *Swan*: *Sunday* and *Munday* nights were Cloudy that nothing could be observed to any purpose, but *wednesday* *December* the 13. the Evening was very clear, and then the Body of the *Comet* was observ'd to be in the sign *Capricorn*, and scarce out of the Beams of the *Sun*, and so could make no great show, but its Brush or Tail extended from it through the *Eagle*, and the middlemost of the three *Stars* called the *Eagles* heart was just in the midst of the Beams of the Brush, and terminated directly at the upper *Star* of the Southern wing of the *Swan*. *Tuesday* the 16. of *December* 'twas so cloudy that no good observation could be made, only the Beams of the *Comet* were seen to the Southward of the *Eagles* heart, about half the breadth of those Beams. — Upon *Friday* at night 'twas seen very apparently, and by the *Globe* it appear'd to be in about 7 degr. of *Capricorn*, and the Tail passing by a very little to the South of the Southernmost *Star* of the three, in the *Eagle*, and upwards up between the two *Stars* in the Southernmost Wing of the *Swan*, towering

For the year. 1682.

up directly to the uppermost Star in *Cassiopeia's* chair, but not reaching much above the *Swans Tail*; and by as near an Observation as could be made by a Quadrant, the Tail was then near 45 degrees in length; *Saturday* and *Sunday* nights were both dark, so that no farther observations could be made. And thus far were the observations of an Ingenious Gentleman, and able Mathematician Mr Nathaniel Friend at his kinsman Mr William Northall Teacher of the *Mathematicks* in *Farrer Street* in *Shadwell*, and by him to us.

2. Another Account we received from a Learned Person out of *Leicestershire*, who being a lover of, and Student in *Astronomy*, took the pains to make these following observations of the motion and progress of the aforesaid Comet, which may be of good use to the curious inquirer — viz. 1680, *Friday December* the 10th, in the Evening, a Comet appear'd, the Sun then near entering into *Capricorn*, it (as near as I could conjecture) must be under the right hand of *Serpentarius* over against *Sagittarius* his head, with about 19 or 20 degrees of South Declination; the Tail (which was small as a wand) pointed to and ended in the middle space between the vultures Tail, and the Star Northerly of his heart towards the *Swans Bill*; its place seem'd to be about the beginning of *Capricorn*, some 2 or 3 degrees above the Sun. *Saturday December* the 11th the Train pointed to and terminated in the *Swans Neck* or Breast.

Sunday the Train pointed to and terminated 'twixt the *Swans* breast and his left Wing. This night, and *Monday* night also were cloudy, and therefore no convenient observations could be made.

Tuesday December the 14th I saw the Star (and I believe it was not conspicuous before) a little pale and whitish, its Train was bushy with a glaring light, and shewed directly under the Star Northerly of *cor vulturis*, and terminated about the pinion of the *Swans* left Wing, and was about an hour or better high at *Sun* set.

A 4

Wednesday

Astrological Judgments

Wednesday December the 15th the train went directly under *cor vulturis*, which Star as near as might be was in the middle betwixt the Comet and the point of its train, so that the Comet must needs be about 10 degrees of South Declination, and the point of the train was 46 degrees high when the Star set.

Thursday 16 the Star it self was not conspicuous by reason of clouds, its train pass'd under the Star Southerly of *cor vulturis*, under the Star West of the pinion of the Swans Wing, and terminated with two Stars about 1 degree distant from the Swans left Foot, 3 or 4 degrees higher than it did the night before, the Star I judge was at this time about Antinous's Ankle with 11 or 12 degrees of South Declination.

Friday 17 I discern'd the Star directly under Antinous's breast West, and the Star in his side was about the mid-way betwixt that of his breast and the Comet, so that it must needs be very near Antinous's knee, with about 12 degrees of South Declination; his Ray pass'd South off, and touched the Southerly Star of the *vulturs* heart, and under Antinous's breast (as I said) and pointed and terminated beyond the Swans tail between Cephæus's head and Cassiopeia's chair, I observed the Altitude of the Star which I found was 14 degrees, and at the same time the Altitude of *cor vulturis* which I found to be 29 degrees: again observing the Star it was about 7 degrees Altitude, and *cor vulturis* 22 degrees. By both which observations I gather that the Star was with Antinous his knee (as I said before) it being 15 degrees below *cor vulturis*, and its train was 4 degrees higher than the last Night — then it continued cloudy and no further observation could be made till Saturday the 25 of December, at which time I saw not the Star, but the train terminating about the bottom of Cassiopeia's Chair. Sunday night December 26, I saw the Star about the middle betwixt the Dolphin and the neck or Throat of Pegasus, the train went under his right knee by Andromeda's wrest, and terminated in Pegasus his head, and then the Star was
about

about the beginning of *Pisces* with 12 or 14 degrees of North Declination. Here it is observable that the *Comet* in 9 nights removed (by its motion) 20 deg. Northerly in Declination, and about 45 degrees at least Easterly in Longitude, viz. from about 18 or 20 degrees of *Capricorn* through *Aquarius*, to 4 or 5 degrees of *Pisces*, as near as can be conjectur'd, that is above 2 degrees in Declination and above 4 (or between 4 and 5) degrees of Longitude every day. Upon the same Evening 'twas seen at *London* at a little past 5 at Night in the South-West, the stream pointing towards the Meridian, or rather South by East, of a pale warlike complexion, 'twas then near the bright *Star* in the neck of *Pegasus*, or rather between that *Star* in the neck and that in his right Leg, in the first Decade of *Pisces* with 38 deg. North Latitude and about 40 deg. Altitude, the stream extended as far as the bright *Star* in the head of *Aries*, and farther as well as could be discern'd by the bare Eye. *Monday* night the 27 of *December* being cloudy it was inconspicuous; *Tuesday* the 28th day it was clear, and the *Comet* was seen very apparently before the neck of *Pegasus*; the 29th, it was in his breast and the train went something North of the two lesser *Stars* in his Breast, and directly under the bright *Star* in his shoulder through *Andromeda's* arm and terminated about *Persus's* shoulder; It was then in 12 or 14 degrees of *Pisces* or rather more, and about 20 degrees North Declination. *January* 4 *Tuesday*, the *Star* was about 3 degrees Westerly of *Andromeda's* head casting the point of its ray towards *Persus's* back. *Wednesday January* 5. it was about 1 degree Easterly of *Andromeda's* head in Longitude about 9 degrees of *Aries* and 24 degrees North Declination. *Thursday* the 13th, it appear'd about 4 degrees above *Andromeda's* Buttock South, it pointed and ended above *Medusa's* head having 25 deg North Declination, and in Longitude 25 degrees of *Aries*. *Friday January* 28. I saw the ray of the *Star* which took its beginning about 4 degrees Easterly and a little verging South of the two Southerly *Stars* of the short side of the

Triangl.

Astrological Judgments

Triangle, and pointing Southerly of the two bright Stars in *Medusa's* head towards *Perseus* his heel, its *Longitude* being then about 12 degrees of *Taurus* and 25 degrees and better of North Declination — And thus as appears by these Observations it has pass'd 132 degrees of Longitude (at least) and 46 degrees of Declination, having augmented its Declination very little this last 14 days, and its Longitude not 20 degrees: so that whereas at first it mov'd at least 4 degrees every 24 hours, now towards its disappearance it moved not above 1 degree; and though at first it got about 2 degrees of Declination every day, this last 15 dayes its Declination was very near the same, viz. about 28 degrees North. February the 8 the Star was in 15 degrees of *Taurus* with about 27 degrees of North Declination, having pass'd but 3 degrees this 11 days in Longitude and one degree in Declination — Thus far this Industrious Gentleman M^r T. W. Rector of *Halton* near *Lancaster* in *Lancashire*. I have adventur'd the publication of these observations, with the rest, that by comparing the one Persons with the other, a true and Artificial account may be collected of the Motion and progress of this Comet for the satisfaction of the Ingenious Students of this Nation., nothing hitherto having been published, though much expected by most lovers of this kind of Learning.

3. Another account of the Motion of this Comet from January the 10th last, New-*stile*, we have from *Hamburg* in the *True Protestant Mercury* which we presume may be credited, viz. Since my last, here was made this following and curious observation touching the Comet.

We had a clear sight of it upon the 26 past, (viz. the 16 day of *December*, Old *stile*) but the clouds presently intercepted, and we could not then make any particular observation of its motion; The 27 S. N. (viz. the 17 S. V.) it appear'd faint and pale, but the 28th, it was very dreadful, appearing a little after 5 in the Evening west South-west; it appear'd with a white glimmering like a Burning coal that is cover'd over very thin with Ashes, the tail was about

For the year 1682.

hour 2 degrees broad below, but above it was broader and extended it self to the length of 68 degrees between the *Eagle* and the *Dolphin* to the Head of *Cepheus*, and it was very bright: the Tail thereof was 50 degrees from the Tail of the *Swan* and 46 degrees from the *Bright Star* in the *Cheek*, and 45 from the neck of *Pegasus*, posited near the *Neck* of *Antinous* or *Ganimedes*, the Longitude 21 degrees of *Capricorn*, and the Latitude 14 degrees Northward. After this we had a thick Air again for 3 days, but upon the 4 day, viz. the 1 Instant (*i.e.* December 22th Old Stile) we discover'd it again, and about 6 of the Clock afternoon it was distant from the *Heart* of the *Eagle* 11 degrees 15 min. and also from the *Neck* of *Pegasus* 39. It was then posited under the *Dolphin*, its Longitude in 8 degrees of *Aquarius* and North lat. 24 degrees, 30 min. so that it varied in these four days 17 degrees and a half, which tho' by reason of the clear light of the *Moon* the Tail, was much paler and smaller to the Eye, yet it did extend it self 67 degrees and 15 minutes as far as *Cassiopeia*. The next night at the same time it appear'd again to our view, and was then also under the *Dolphin*, but 5 degrees nearer to the *Horse*, viz. *Pegasus*, and from the Tail of the *Swan* 38 degrees, from the *Heart* of the *Eagle* 14 degrees 45 minutes, from the *Cheek* 44, and from the *Neck* of *Pegasus* 33 degrees 45 minutes, its Longitude in *Aquary* 12 degrees 30 minutes, and Latitude 22 degrees 30 minutes North, extending through *Cassiopeia* with a broad and thin Tail 72 degrees. After this the Air was thick again for three days, but upon the 4th, viz. the 7 Instant New Stile (*i.e.* the 28th of December English Account) having a clear Moon-shine we discovered the said *Comet* again the 4th time at half an hour past 8 at night, 24 degrees distant from its former place between the Neck and the left Foot of *Pegasus*, 8 degrees from the *Dolphin* Northwards, and from the *Cheek* 50 degrees 40 minutes, from the Tail of the *Swan*, 32 degrees 20 min. and from *Caput Andromedæ* 27 degrees 15 minutes, the Tail of the *Comet* was greater and clearer, but shorter than before,

Astrological Judgments

fore, extending only to 55 degrees, between the *left Foot* of *Andromeda* and the middlemost *Star* in *Cassiopeia* to the head of *Perseus*. Thus far the Account from *Hamburg* which doth very much confirm the forgoing observations made in *LANCASHIRE*.

4. Here follows another short but significant account of the *Comets* motion which I shall also insert, and then proceed to the consideration of its Effects, viz. This *Comet* was seen in *France* by a person that came from *Bordeaux* to *London*, and upon the 21, 22, and 24th of *November* 1680 about 6 in the Evening setting South East being then I suppose in 10 or 12 degrees of *Sagittary*; but on *Friday* the 10 of *December* was the first night it was seen at *London*. It was also seen on *Saturday* night, but on *Sunday* night the stream was seen rising South West by West and quarter West or South, 59 degrees West; at 6 in the Evening the 12 day, the stream was rising a little to the West ward of the *Zenith*, and to the uppermost *Star* in the *Dart* of the *Eagles* wing about 50 degrees in height, and within two degrees of the *Sun*, the *Comets* motion was near the *Arch* of a *great Circle*: At the beginning it moved about 4 deg. in a day natural, or 24 hours, and did gradually lessen its motion to one deg. 55 minutes in 24 hours, and afterwards much less; its stream at first appearance pointed a little to the *Westward* of our *Zenith*, but at last to the *Eastward*. Take the particular observations as they were made in *London* by two able *Astronomers* as followeth.

For the year 1682.

Hence the *Diurnal Declination* and *Right Ascension* may be had by *Trigonometry*, if any curious Person (and lover of these Speculations) will please to take the pains.

Having premised this necessary account of the progress and motion of this *Comet*, we come next to discourse its Effects — And in Order thereunto something should be said of the matter or substance of *Comets*: But concerning the nature, Formation and matter of *Comets*, authors (and indeed most Philosophers) do very much vary in their Judgments and opinions. It is the opinion of *Aristotle* the great

Stargazer

Astrological Judgments

Sagittis, that the matter of which *Comets* or *Blazing Stars* consist, is an *Exhalation* hot and dry, fat and clammy, attracted or drawn by virtue of the Heavenly Bodies into the highest Region, or part of the Air, and sometimes into the Starry Region where it is closely conglutinated into a great Lump by reason of the constant and continued supply it hath from below so long as there is a working to exhale it; and it being thus compacted and exhaled is set on fire in convenient time, by the excessive heat of the place where it resteth. It sometimes continues long in burning, and sometimes but a little while, according to the paucity or plenty of the matter whereof it consists. But we do partly adhere to *Paracelsus* who tells us that a *Comet* is *crescens singulari*, not produc'd from any seed or *Matrix*, but compos'd by *Angels* and spirits; yet our private opinion is that *Comets* are preternatural, and the matter of them not perfectly known to any mortal man: and therefore we shall say no more concerning the nature or existence of *Comets*, but leave every judicious person to the enjoyment of his own Opinion in this difficult and very mysterious point——

That which is most material is to inquire into its effects, and this every inquisitive person would be prying into: Now there are many things to be considered before a rational Judgment can be deduc'd concerning the real signification of *Comets*, viz. Magnitude, Colour, form, splendor, place, motion, continuance or duration, also its position in respect of the *Sun*, and its habit or relation as to the parts of the Earth; This *Comet* we (in *England*) saw first in the beginning of *Capricorn* near the Body of the *Sun*, it had a very swift motion as appears by the aforesaid narration (whence all the aforementioned particulars may be collected) it had also a very prodigious stream, and pass'd through *Capricorn*, *Aquarius*, *Pisces*, and *Aries*, but disappear'd to us in *Taurus*, and was seen from the 10th of *December* to the latter end of *January*, at least 50 days; it set after the *Sun*, and therefore was *Occidental*, and pass'd near no Planet but *Venus* in *Aquary*, the part of Heaven 'twas seen in was South West,

it

For the year 1682.

it mov'd through the 9th, 8th and 7th houses to our sight, and it was of a pale, leaden, *Saturnine* Colour (for the most part.) These things considered (together with the Constellations it began, mov'd through, and ended or discontinued in) it manifesteth or declares unto the World most wonderful effects: For 'this is a Maxime, the more *Comets* and the longer time they continue, the more certain are the portents signified by them. *Stella cum cauda indicat prostratum longius negotium*; A *Comet* with a Tail (and this had a prodigious one) declares or manifests the matter intended thereby to be protracted and continue the longer. *Quotiescunque igitur in mundo Cometa apparuit, toties ubi terrarum angustias pronuntiat*, *Mignotus* lib. 2 fol. 218.

As often as any *Comet* appears in the World, thou mayst assuredly pronounce unto the Inhabitants of the Earth tribulations, sorrows and afflictions: This *Comet* signifies many fierce tempests, both at Sea and Land, more impetuous blasts of Wind than usual, strange treacheries, unnatural Barrenness or dryness of the Earth, corrupt Aires, with Pestiferous qualities reigning therein; from such corruptions the Death of Cattle follows, and the ill nourishment of the fruits of the Earth, then a *plague, Famine*, and such sad misfortunes and afflictions to mankind: *Inter nobilissima que in aere videntur ostenta, sunt Comete*. And therefore if a *Comet*, or *Comets*, be accounted amongst the most notable *signs* which are visible in the Air, certainly they can signifie no small or petty matters: *Comets* are like so many *Beacons* set up to give mankind warning of approaching, or impending calamities; and though (strictly) they cannot be said to be the causes, yet they are certain signs of notable changes and sad disasters to happen in the World.

— The Blazing Star,

Threatning the World with famine, Plague and War;
To Princes, Death; to Kingdoms many crosses;
To all Estates inevitable losses;
To Herdsmen, Rot; to Plowmen, hapless seasons;
To Sailors storms; to Cities, civil treasons!

Dubartus.
This

Astrological Judgments

This Comet was of a Pale Saturnine Colour, and as we said before Occidental of the Sun. *Cometa Orientalis effellam suam citius ostendit, Occidentalis tardius*; An Oriental Comet doth suddenly shew its effects, but an Occidental Comet doth it more slowly and deliberately — and therefore we cannot suddenly expect its operation or effects; this Comet is seconded by a famous Conjunction of Saturn and Jupiter, and may put forward or aggravate the effects thereof. *Junilius* writes that any Comet of the nature of Saturn signifies many pernicious and strange kind of evils to happen amongst men; for Saturn is a Planet inimical to nature and all existencies thereof, and many times produces Famine, the Plague, Exile, penury, grief, trouble and Vexation, and an absolute destruction of all things that grow on the Earth useful for man or Beast; Excessive cold Air, great Frosts and Snows, High and Tempestuous Winds, shipwrack, and damage in navigation, a destruction and want of fish, great Inundation and storms; Locusts and Caterpillars in abundance destroying the Fruits of the Earth ——— This Comet being visible not only to Europe but also to more remote parts of the World, the influence thereof is more universal, and not restrain'd to particular places, as England, Scotland, Ireland, Holland, France, Spain, &c. The Political cause of Comets appearance, is the Denunciation of future Calamities, that men being forewarned may fortifie themselves with necessary safety against those impending afflictions, and prepare their minds and affections patiently to bear or suffer those miseries they see approaching: they also invite man unto Repentance, and to supplicate Almighty God for to divert his impending Judgments from them, and that he would mitigate his anger towards them. The Comet did pass through several Signs and through Signs of each of the four Triplicities; and therefore those Nations and People subject to those Signs it passed through, must expect many enormities, as Death of Inhabitants, (for the sign Aquary is a human sign) scarcity or want of Provisions, because Capricorn and Taurus are

are *Earth's* Signs, and not only so, but great Mortality amongst Cattle also; for *Taurus* is a Sign *Belial* — and this Judgment is deduced, as of *Eclipses* according to *Proclus* — As unto the Kingdoms, People, Cities, &c. subject unto the Airy Triplexity they are assigned thus, *Assiria* which is part of the Emperour of Germany's Patrimony, *Lithuania*, *Alisia*, *Flanders* and *Brabant*, the Southern and South West parts of *Greece*, the Western parts of *Tartary*, the Southern parts of *Moscovia*, *Westphalia*, the South and West parts of *Bavaria*, the Western parts of *Arabia*, the City of *London*, *Hamborough*, *Lisbon* in *Portugal*, *Vienna*, *Norimberg*, &c. with many other places not yet assigned to any Sign of the Zodiac — But if we consider the Quadrangle of the Signs, then is *England*, *Ireland*, part of *France*, all *Scotland* and *Holland* menaced, also *Polonia*, *Denmark*, *Zeland*, *Sweden*, the whole *West Indies*, *Brandenburg*, *Barbado's* — &c. *Oxford* in *England*, *Florence* in *Italy*, both City and Kingdom of *Naples*, *St. Lucas* and *Cadix* in *Spain*, *Venice*, and *Constantinople*, cum multis aliis — The Emperour of *Germany* is hereby threatened with great Consumption of his Treasure accidentally, the *French* Nation with some remarkable Plot or Insurrection amongst themselves, also a great and potent Enemy will shortly rise up against them. Little or no success to the *Danish King*, breach of Allies and other misfortunes. *Scotland* and *Holland* seem much concerned, or may be within few years. 'Tis suppos'd the *Comet* passed through half the Signs of the Zodiac, and therefore no less than half the habitable parts of the World may be passive in one kind or other before the effects be extinguish'd — for *Nellius* *Comets* qui *malum nullum ferat*; There is no Comet which points not out some evil some change. And *Ptolomy* tells us that *Comets* in Astrological Judgments, have next to the *Planets* the greatest influence, and ought most seriously to be considered; and we do farther declare, that such like prodigious *Phenomena's* have their manifold and certain influence upon the generality of mankind as well relating unto *Kings* and *Princes*, as unto the Com-

monalty

Astrological Judgments

monality of People. — If so, once more I say, we may within these few years expect ('tis to be fear'd) to hear of the undoing of many People, Famine and Pestilence, Banishments, Affrights, or terrours, strange losses amongst great Cattle, unusual Tempests, and consequently many Shipwracks, also many Pyracies, obscure weather, strange Inundations in some places, Scarcity of Grain of most sorts, many melancholy Diseases, &c. and thus much shall serve at present for the Judgment of the late Comet.

Those

For the year 1682.

Those that have a desire to calculate the *Right Ascension* and *Declination* of this *Comet*, may easily do it very exactly by the Rules given in page 284. Prop. 4. of *Clavi Astronomicæ distatæ*. Exemplum I desire the right Ascension and Declination of the Comet the 29. of December S. N. Longitude 21 30' vs lat 15 N. The distance of the Comet from the first point of Aries is 68 30, then—by the rule. To the Sine of 68° 30' add 2. ————— 9958678
I add to the Cotangent of the lat. 15. ————— 9971047
The sum is the Tangent of 73 56'. ————— 20943029
This is the first Arch, to which I add 23. 30, the sum is 97. 26' for the second Arch, whose complement to 180 is 82. 34'. then I say as the Sine of the first Arch ————— completion Arithmetical ————— 8597904
to the Sine of the second Arch 82.34 ————— 9111842
so the Sine of the lat. 15 degrees ————— 9412996
to the Sine of the Declin. 6. 34'. ————— 9082742
Now in regard the Longitude is in a Southern Sign and the lat. North, and greater than the Declination, therefore the Declination is North also, according to the Rules given in page 389 of the afore said Book — And for the right Ascension I say as the Sine of the first Arch 73 56' ————— 9017340
to the Sine of the second Arch 82. 34'. ————— 9996335
so the Tangent of the Longitude 68. 30'. ————— 9404602
to the Tangent of 69. 7'. ————— 10418277
which subtracted from 360 degrees, because the Longitude of the Comet in this example is in the fourth Quadrant, there remains 290 degrees 53 minutes for the right Ascension of 21 degrees 30 minutes of Capricorn with 15 degrees Nor. Lat.

Co. Ar.

And here the Reader may see the excellency of *Trigonometry*, for neither *Astrol's Primum Mobile*, nor any Tables extant, will give the right Ascension and Declination of this *Comet*, because none of them exceed 9 degrees of Latitude; which are sufficient for any of the *Planets*, but not for *Comets*

Astrological Judgments

Comets and Fixed Stars: and thus with the same ease having the Longitude and Latitude given, may be computed the Amplitude; as also the Rising and Setting of the Comet by any that please to delight themselves with such kind of recreation. This Account I received of my Honour'd friend and Patron the Learned *Ellas Ashmole Esq.* This Comet was also seen at *Mexico* the 29 of November 1680. S. V. in 16 degrees of *Libra* near the *Virgins Spike*, of which expect more in 1682.

The next thing in Order to be considered is the *Winter quarter*, which this year commences *December 10th 1681.* 24 hours, 19 minutes P.M. and continues till *March 10th* following. The Position of the Heavens in the Meridian of *London* is thus, viz. you will find 12 degrees of *Leo* upon the Cusp of the Mid-heaven, and the very beginning of *Scorpio* ascends, the *Maer* separates from a *Trine* of *Stars* and *Trine* of the *Sun*, and hastens to a *Quadrat Aspect* of *Saturn*, she is posited in the *West Angle* in her exaltation, *Jupiter* in the 5th and *Mars* in the *Third House*, both strong and very powerful in their exaltations also, but *Saturn* is in *Leo* near the Cusp of the 10th House, as those that desire it, may satisfy themselves; here being no room to infer the *Figures*.

The premises considered, as also those *Grand Configurations* of the *Planets* this *Quarter* (more particularly those in *January*) together with other Circumstances concurring, we may rationally conjecture that the humours, and dispositions of the People in general both in *England*, and several other Countries of *Europe* will be strangely inclin'd to *Choler* and passion, they will be too lofty and high in their attempts: 'tis a true saying though ancient, *Tot mundi Superstitiones quot Caelo stellæ*; there are as many superstitions, vain Opinions and conceits in the World as there are Stars in Heaven: every person pleads for and endeavours to promote his own designs. Now expect to hear of new divisions breaking out, (if not happily prevented) also notable complaints and dangerous Accusations against great persons,

persons, carried on with much vigour and courage, old crimes will be new revived, and those persons that know themselves guilty ought now to look about them most warily; for this is a season of great and very deliberate consultations, and many material matters are and will be under consideration, the Effects of which we shall this *Quarter* be sensible of. Here are no less than three *Planets* in their *Exaltation*, and the *Angels* all fixed, the *Moon* is in *quartile* to both the *Infortunes*; (besides those many oppositions of the *Planets* amongst themselves in *January*, and *Lunar Eclipses* in *February*.) We shall now find by experience, that there is no resisting the decrees of Heaven, and that those vices which are passions in some men, are mere habits in others; for those persons who were born in a storm will find it very troublesome to live in a calm; they will be active though to their great Degriment, and sometimes total ruine — Who can therefore pity such persons who delight to make their lives miserable? But *Scipius debet incipere à fine*; A wise-man takes his beginning from the end of a matter or action — Men's minds, affection and Judgments are too frequently subject to mutability and alteration, we could wish there were more unity and that people would not perplex themselves with vain fears and jealousies. *Religious* disputes arise, and those persons that pretend themselves the most zealous (whether *Presbyterians*, collected Churches, as *Anabaptists*, *Quakers*, &c.) appear the most dissatisfied and uneasy about this time — and are strangely disturbed, with fears of some approaching prejudice or affliction — and thereby create troubles to themselves and others, and this we judge will appear chiefly in the Month of *January*; but we hope there may be a better understanding one of another in *February* or the beginning of *March* — Many ill-minded persons have too lately (as heretofore) endeavoured to subvert the Government, and make both Church and State truckle to their wills, and ill-considered resolutions; but they have found by dear bought experience, that obedience is

Astrological Judgments

better than sacrifice. There happens a total and almost Central Eclipse of the Moon, February 11th, the middle time 10 hours 17 minutes P. M. Digits Eclipsed about 20. the Duration above three hours, therefore its effects continue three months odd days, it falls in 3 degrees 31 minutes of *Virgo*, the effects of which should be discoursed distinctly apart, but being limited, I have interwoven the Judgment thereof in this and the subsequent quarterly *ingresses*; Its effects terminate about the midst of May, and put forward many notable influences of the *Planets* for 3 months. In our *Tropical Figure* 'tis observable that *Saturn* is Retrograde in *Leo* a *Regal Sign*, and the dignity of the *Sun* posited near the *Mid-heaven* in his Detriment — *de minimis nunquam judicat Saturnus*) whence we may rationally judge that about this time, (or for the most part during this *winter quarter*) we shall have very superlative Counsels and serious debates of Laws, Privileges, Customs, Leagues, Alliances, Antiquities, or matters relating thereunto, a reviving of many things acted long since; controversies concerning Houses, Lands, Leases, Abuse of Tenants, and such like-affairs will take up the consideration of many sober, judicious persons in *England*, and many other Countries of *Europe*; But we hope the *Merchants* are made happy with safe returns of their Shipping from the Northern, and South Western parts of the World; *Jove* in the *ninth* in *Cancer* his exaltation portends no less — as also the great promotion of *Church affairs* and those Learned persons of this Nation that are concern'd therein. For some worthy and very deserving persons of the long Robe receive preferment, and the next *Quarter*, by the active Endeavours of very worthy and generous spirited persons we may expect not only a right understanding, but a better settlement of some grand affairs, than has been produced some preceding Months — Yet the *weather* should be sharp and too often violent to the prejudice of many both at Land and Sea — The *High-way man* will be very active and play his part to purpose; the *Dysentys* not much different from

Astrological Judgments

In this *Vernal Figure* the *Angles* are partly moveable and partly fixed, and at the *Fall Moon* postional the *Moon* applies to the *Quadrat* of *Mars*, and *Opposition* of *Jupiter*. Here both the fortunes are in their exaltations, and the *Superior Planets* Angular, *Mars* is also in his own Dignities near the *Sax* (who is not only entering his exaltation, but) in trine to *Saturn*; *Mars* rules the two Principal Angles, and the *Moon* separates from the Body of *Saturn* and trine of *Mars*, and hastens to the Trine of *Mercury*, she rules the North and West Angles, but *Jupiter* and *Venus* are copartners in the Dominion thereof, as may be seen by the *Scheme* it self. The premises considered we may from thence conclude this *Spring quarter* to be a season of much Action, wherein matters of very transcendent Importance, and great concernment as to national or publick affairs, will fall under serious consideration — But we would have no person think that we affirm these or any subsequent *Configurations* of the *Planets* to be the only immediate causes of the succeeding Actions in the World (whether good or evil) no; we do conclude, and know by experience they are the Signs and fore-runners (in a natural way) of such Accidents or Actions which do very much sympathize or correspond therewith — We see no reason in Art but we may live in much Tranquillity and Peace, if we will but endeavour so to do, and resolve to be ruled by reason, and quietly submit to the prudent Government of our superiours, as in duty we are bound, without repining or complaining when there is no just cause for the same. The *Moon* is posited near a Regal but violent fixed *Star*, and has been lately in *Conjunction* with *Saturn*, which gives the People great caution to pay obedience to their Governours, and avoid all rash, violent and treacherous Actions which must certainly end in ruine and confusion. *Saturn* is *Retrograde* in *Leo*, and we may justly fear before he leaves or departs out of that Sign and enters *Virgo*, that we shall be too sensible of his dire effects, (but *Italy* and *Rome* it self with no mean Persons therein, are more severely menaced)

mented) for by experience we have found, not only a scarcity of Corn, and Death of Cattle has followed, but a great Mortality of mankind also. Let us therefore pray to the great God of Heaven and Earth to divert his Judgments which he usually sends for the punishment of the wickedness of mankind. And we have some certain grounds in Art to judge that either the *Plague* or some most violent, Pestilential disease is too near approaching; not that we desire to affrighten the People, but rather give them timely warning to amend their lives and repent: for 'tis a received *Maxim* of the Ancients, viz. *Saturnus in Leone inter homines, &c. i. e.* as often as *Saturn* transits the Sign *Leo*, he doth signify the Death of mankind, few Showres of rain, thin Crops of Corn in many places, and those not very wholesome—But these Calamities may not be expected this *Quarter*, nor perhaps this year; for *Saturn* continues in *Leo* till *June* 1684. and therefore the year 1683. for that, and some other reasons (we fear) may too truly verify this Judgment—The Month of *March* will doubtless produce very various transactions in mundane affairs—We may then expect to hear much News and that very considerable too from *Germany* and those Countries adjacent. Great persons appear now highly active and ministerial, &c. and many persons even amongst us appear male-content and are too subject to promote popular tumults and disturbances; let such persons look to it, the result will prove not only dangerous but fatal—*April*, and especially the first half thereof, may (we fear) produce not only much sickness and mortality amongst mankind, but strange Rumors and new fears and Jealousies amongst the People, and thence commotions and treacherous actions are fomented—But the Month of *May* appears more calm and healing, and many late Enormities happily regulated and composed to the great satisfaction of all honest and well minded people; but the weather may not be so kind and seasonable as expected: 'tis much to be fear'd we shall have more drought or extremity of weather in its kind to the detriment

Astrological Judgments

triment of the laborious Husbandman and Farmer, at least to the aggravation of his fear and trouble of Spirit ——— The *Diseases* of this *Quarter* will not only be many, but such as will be found both violent and mortal, we might also mention the Casualties or Wars very near approaching and now impending over some other Nations of *Europe* : for what other thing can that extream quick Motion of the late *Comet* signifie but an acceleration of Divine vengeance where 'tis intended to be inflicted? ——— But we proceed to the consideration of the *Summer quarter*, which this Year commences *June* the 11, at five hours 30 minutes *Mane*. at which time 22 deg. of *Pisces* culminates, and about 21 deg. of *Cancer* arises in our *Horizon*, the *Moon* is in *Capricorn*, her detriment, defluxing from an *opposition* of *Mercury* and *Venus* and applies to an *opposition* of both the superiour *Planets*. Hence we judge the vulgar sort remain still dissatisfied, and all or most of their Actions appear violent and headstrong, many are forced to leave their Habitations for their Transgressions and ill deportment, but pretend themselves sufferers, and many scruples of conscience without just cause ——— but we say according to the proverb, 'tis ill jesting with edge-tools ——— for *vita & mors in manibus Lingue*, Life and Death is in the power of the Tongue ——— and Fate is doing our work while we sleep ——— *Exunt diversitates atque controversie inter homines, & altercationes & dissensiones in fide*: There will arise many controversies amongst the general sort of men by reason of diversities of Judgment in and about *Religious matters*. Yet we have about this time very mature Councils and firm Resolutions tending to a general union and compofure of Irregularities in these affairs — and many other Grievances and Enormities too long complained of ——— 'tis an undoubted truth, *That never was any man so great, but he was as lyable to suffer mischief, as he was able to do it*; and if so what can the meaner sort expect? ——— There seems to be great disputes, and secret whisperings amongst the vulgar sort in most Nations of
Europe,

For the year 1682.

Earth, and we may upon good grounds expect many dangers and tribulations will attend their persons: but we hope in some short time they will learn so much Experience as to be able to discover their own failings in ranking uncertain and very irregular measures. Many are the Conjunctions of the Planets this Summer quarter, viz. no less than five in *June* and three in *July* (being all the mutual aspects of the Planets in those two Months) there is also two Conjunctions in *August*, besides an Eclipse of the Moon which is total, but scarce visible in our Hemisphere, the middle time *August* the 8th five hours 55 minutes *Mars*.

All which being duly considered shews that during, this Quarter there will be very *Transcendent Consolations* and grand Councils held in most Nations of *Europe*; God Almighty direct the Hearts of those that sit at the Stern of Government, and give the Subjects patient and willing minds to Obedience. — For now the People will have just cause to rejoice and be thankful to his Sacred Majesty for his Acts of Grace and Favour conferr'd upon them — And we advise the People of *Scotland* and *Holland*, and some others places under *Caster*, to act warily and with much caution, for the Moon (as we said before) is in her *Detriment*, separating from the Opposition of the two inferior Planets, and applying to the Opposition of the two superiours — We expect strange uncertain weather, and that most kind of Grain should advance in Price, and a general scarcity much feared as things appear at present. And to conclude our Judgment of this Quarter, the Heavens declare a very sickly season, many Aged persons (now amongst others) make their Exit out of this World, and Death now in good earnest feeds upon dairies; therefore in all thy Glory, *Memento mori*. And thus I proceed to the consideration of the Autumnal or Harvest quarter, which begins September 12th at nine hours at Night, at which time there is 13 degrees of *Aquary* culminating, and about 19 degrees of *Gemini* ascending, and at the same time we find also an ominous Conjunction of *Saturn* and *Mars*

Astrological Judgments

Mars in that *Regal Fiery Sign Leo*, the influence whereof we fear may stir up strange kind of Heats in mankind, *Religious Controversies*, and a general dissatisfaction tending to very rash Actions, as mutinies, quarrels, contentions, in many places of *Europe*, and in *Italy*, and *Rome* in particular — As for those Hot-spurs in *England* that will be troublesome to themselves and others, let them beware, for assuredly they will be met with and severely suffer for their madness and Folly — many are the configurations of the *Planets* this *Quarter*, and much alterations we may expect in the weather, also great mortality ('tis to be feared) amongst mankind, from violent *Pestilential Distempers*. From all such *Diseases*, and other troubles and afflictions let us Pray, *Libera nos Domine*. Now in regard there happens a Famous conjunction of *Saturn* and *Jupiter* in *October* this *Quarter*, we shall refer the Reader to the *Monthly observations*, for the transactions of each *Month* therein, and briefly discourse something of the effects of this *Conjunction* which we design to handle more copiously; as also the late *Comet*, (if God spare life) the next year — and so conclude our Judgment for this present year —

This *Conjunction* of *Saturn* and *Jupiter* falls in about 20 degrees of the *regal Sign Leo*, and according to the accurate *Tables* of the Famous *Keplar*, and the Laborious *Mr. Thomas Street*, it should be celebrated upon the 23th day of *October* about five hours P. M. we shall omit the particular Calculations which we have ready till the next opportunity — The *Fiery Trigon* is called by *Ptolomy* the first of the *Zodiack*, and it may not be forgotten, that the *conjunctiōnal* returns into this *Trigon* have always been attended with very notable and memorable changes both in Church and State, and very great Actions and alterations in Kingdoms and Countries almost universally all over the World — The first *Restitution* of this *Trigon* after the Worlds Creation, fell in the Days of *Enoch*, the second in the universal *Deluge*, the third in *Moses's* time and the Children of *Israels* delivery from the *Egyptian* slavery,

Every, the fourth in the *Manerity* of the *Mides*, the fifth in our blessed Saviours time and the Roman Empire, the sixth in *Charls* the great and the Translation of the *Wistars* Empire to the *German*, and now we say this seventh return into the *Fiery Triplcity* hath a singular mystery of *Substiss* in it, and it promises something of more signal moments than the *Conjunctions* in other *Triplcities*, to the World — Its effects will be in operation more or less about 20 years. And to find the true moment of this *Conjunction* from the best *Tables* extant, will be found a matter of great difficulty, nay, its not possible to be obtained in regard of the slow motion of the superior *Planets* — A *Conjunction* of *Saturn* and *Jupiter* in a *Fiery Sign*, or in Signs of the *Diap Triplcity*, signifies the *constitutions* or *revolutions* of *Empires* and *Monarchies*, and the reason given is, because *Jupiter* and the *Sat* govern that *Triplcity*, and its many Countries great Barrenness doth succeed — We conceive the genuine sense of this present *Conjunction* is that men's intentions and Actions generally will wholly incline to settle, or unsettle, the Laws and constitutions, customs, way of whole Nations, *Governments*, Kingdoms or *Common-wealths*; or the full establishing, or utter disturbance of Families and their Estates, Religions, of several Judgements, *Priesthoods*; &c. for matters intended from such *Tripl Conjunctions* are *quedam generalia*, certain general things appertaining unto mankind suddenly to ensue. The succeeding *Eclipses* and *Conjunctions* of the inferior *Planets* in several Signs do after some time very near point out the particular, thing or things, and the particular People or Nation — More particularly thus, we say this *Conjunction* falling in a *Regal Sign*, and thrice repeated thereby, viz. *Lao* the Ascendant of *Italy* and *Rome* — it will therefore have great force and operation thereon — though no man can say to its total subversion, however before these *Superiors* have perform'd their Period in this *Triplcity* (which will be about the year 1801) there will assuredly be very great Alterations, if not a Total Cata-

rophe

Astrological Judgments

trophy of the sovereignty and Dominion thereof, and in fine this conjunction must immediately concern the *Sea of Rome*, but it elevates the power of the *Magistrate* and Authority of many Courts to a very great degree, it advances the Prerogative of *Princes*, and promotes *Monarchy* in *England*, in regard it falls in a *regal Sign* and in *France* to *Aries England's Ascendant* ——— And therefore it can portend nothing but *Tranquillity* to us; but violent and raging *defeates* must certainly be expected, from which good Lord deliver us. *Amc.*

— 'Tis observed by a learned *Philosopher* of our Nation, that *Prognostications* or the foretelling of future events relating to *Kingdoms* or *States*, (from the consideration of *Starry influences*, and the configuration of those *Glorious* (celestial bodies) are like seeds scattered in the vast field of time; and if so, 'tis a wonder if some of them do not appear and grow up to maturity; And we do affirm with the profound *Paracelsus* that *Asciendens constellation status arduas querentibus magna natura*, *ho.* Many *studious* People searching into the secrets of nature, not by their good *Genius* have mysteries revealed and discovered unto them. Most men know and will readily acknowledge that *Superiours* do influence and govern *inferiours*, and there is an appointed season for every thing under the *Sun*. Nor will any person we presume deny that *Heaven* is a large expanded volume in which may be read many *Grand meditations* (as effects in the bosome of their causes, or *Events* prenotified by certain *Signs*) long before they are brought into *Act* here on *Earth* ——— But the natural grounds or dispositions of the celestial Bodies, which like *mediate Links* in the grand Chain of secondary causes, have produced, or at least co-operated in the production of these our late disturbances, or the extraordinary *Phenomena* which the Almighty makes use of to prefigure his will and pleasure, are like *Beacons* to admonish the World of such impending *Chastisements*, and cannot but certainly deserve

For the year 1682.

deserve our more curious observation, and enquiries — And in Order therunto, we ought in reason to consider what *New Star*, or *Star*, have appeared this last Century of years, also the *several Comets* and their effects, and in particular the last which was seen all over *Europe* in *November* and *December* 1680, whose signification we are yet scarce sensible of: moreover we are to look back upon the effects of the *Conjunctions* of the *Superiour Planets* through the *several Triplacities*, and observe the effects thereof, but more especially this next *eminent Conjunction* of *Saturn* and *Jupiter* thence repeated in that *Regal Sign* *Leo*; also the *Conjunctions* and *oppositions* of *Saturn* and *Mars*, together with *Annual Revolutions* and other *Cardinal ingresses* and *Lunations* of the present and ensuing years, with the *Eclipses* of the *Luminaries*, and the more forcible *Configurations* of the *Planets*, and from these foundations we design (God willing) to present the *World annually* with our *Conceptions*, *Sentiments*, or *Astrological Judgements* according to our *Limits*, and as occasion requires. —

Another account of the late Comet, as it was seen and observed at Erford, the chief Town of Turingia in Germany (which came late to my hands) communicated by my very worthy and noble Friend the Learned Elias Ashmole Esq; and here inserted the rather because it gives an account of its motion from six degrees of Libra, but we in England saw it not to any purpose till it appeared in Capricorn near the Sun at his entrance therein as before intimated —

The first time when the Comet did appear was the 17 of November New stile 1680, in the morning, its distance from the Planet Mars was 27 deg. in the left wing of Virgo, of a pale Colour, the Tail being very like a whitish small line, directed to the feet of the Lyon, and its Longitude in 6 deg. of Libra, and latitude 1 deg. and some min. to the South. The 18 of Nov. the Comet could only be seen through the Clouds no bigger than a Star of the second magnitude, so that some would have believed it was a Comet.

Astrological Judgments

Comet. The 19 of November it was near 3 deg. and a half from Spica virginis in 16 deg. of Libra and the lat. 1 deg. South — its motion in 48 hours almost 10 deg. The 20 and 21 of Nov. 'twas cloudy and could not be observed. The 22 this Comet did appear again but was not exactly measured, the Tail being directed in a straight line towards Spica virg. and its body much bigger and clearer than before, and some what like Spica, and its Longitude about the beginning of Scorpio very near the Ecliptick. The 23 and 24 of Nov. the weather being cloudy, and the motion of the Comet tending to the Sun, the observations were put off till the 11 of Dec. when in the Evening after the Stars of the first Magnitude did appear, and Mercury (who very rarely can be observed) had been set 3 quarters of an hour, the Comets Tail only could be seen rising from the Horizon and directed or pointing to the middle of Aquila, almost every where 3 deg. and a half broad, and 40 deg. long, according to this direction of the Tail and the description made upon a Globe by the Arch of a great Circle; the Comets place was accounted to be in 7 deg. of Capicorn with 14 deg. 15 min. lat. North, and its motion from the 22th of Nov. till this day (that is to say, in 19 days and a half) hath been at least 74 deg. 30 min. viz. Longitude in the Ecliptick — The 12, 13, 14, 15, 16, and 17th of Dec. the thickness of the Air would not permit to make any observations, only some people did perceive the 12th of Dec. a small brightness in the place where the Comet was seen, and some of them thought it to be Lightning —

*The 18 of Dec. in the Evening the Comet did terrifie a great many people, its reddish tail being now very near the Stars of the Dolphin, covering with one side the last Star of the 3d magnitude in the lowest wing of the Swan, the other side touching the midst of that space between the said Star and another that stands a little before him, and the broadness of the Tail being every where alike was accounted 4 deg. but the length did trace to the head of Cepheus about 70 deg. the Body of the Comet was at this time under the Breast of Antinous in 22 deg. of Capricorn, and 18 deg. 13 min. lat. North. The rest of the observations to the beginning of Taurus expect the next year.

A Table of the Moons Latitude every other day at Noon, for the year 1682.

January hath xxxi days.

- 1 **A** **Acto. Pears Day.** ☾ in 28 29 *I by the 10 years*
- 2 **B** Sun rises at 8, sets at 4. *Ephemerides of Dr. Flai-*
- 3 **C** Moon sets 4 m. p. 9 aftern. *nus of Bononia.*
- 4 **D** Moon sets 9 min. past 10 afternoon. ☾ 3^d 15^m 17.
- 5 **E** Moon sets 22 min. past 11 afternoon.
- 6 **F** **Twelfth Day.** *First Quarter* 28 min. past 8 at night.
- 7 **G** Moon sets 22 min. past 1 in the morn. ☾ 5 53.
- 8 **A** Moon sets 29 min. past 2 in the morning.
- 9 **B** Moon sets at 46 min. past 3 in the morn. ☾ 8 33.
- 10 **C** Sun rises 50 min. past 7, sets 10 min. past 4.
- 11 **D** Moon sets 18 min. past 6 in the morn. ☾ 11 18.
- 12 **E** Moon sets 11 min. past 7 in the morning.
- 13 **F** *Full Moon* 12 min. afternoon. ☾ 14 7.
- 14 **G** Moon rises 27 min. past 5 afternoon.
- 15 **A** Days lengthened one hour. ☾ 16 58.
- 16 **B** Moon rises 1 min. past 8 afternoon.
- 17 **C** Moon rises 9 min. past 9 afternoon. ☾ 19 53.
- 18 **D** Moon rises 24 min. past 10 afternoon.
- 19 **E** Moon rises 37 min. past 11 afternoon. ☾ 22 54.
- 20 **F** Sun rises 36 m.p. 7, sets 24 m.p. 4. *Last Quarter* 57 m.
- 21 **G** Moon rises 29 m. p. 1 morn. (past 10 mane.)
- 22 **A** Moon rises 30 min past 2 in the morning.
- 23 **B** Term begins. ☾ 28 56.
- 24 **C** Moon rises 24 min. past 4 in the morning.
- 25 **D** Conversion of *St. Pant.* ☾ 2 3 m.
- 26 **E** Moon rises 2 min. past 6 mane.
- 27 **F** Moon rises 40 min. past 6 mane. ☾ 5 13.
- 28 **G** *New Moon* 33 min. past 3 afternoon.
- 29 **A** Moon sets 40 min. past 5 afternoon. ☾ 8 28.
- 30 **B** King Charles the first, *Warrpr.* ☾ 10 5 m.
- 31 **C** Moon sets 45 min. past 7 afternoon.

Si Deus nobiscum, quis contra nos?

Here are yet a sort of subtil (and no less wicked) Agents amongst us, that are continually active in hatching mischief; and the people in general in most parts of this Nation perplex themselves with strange ambiguous thoughts, as terrible as if the day of Judgment were very near at hand: Indeed we have no less than five *Conjunctions* of the Planets amongst themselves this Month, which certainly (by virtue of their Influence) will have remarkable Effects in one kind or other in many Countries and Kingdoms of *Europe*— Many secret Consultations and private Conspiracies are about this time promoted—— and several Guilty persons do now fear their dark Designs will suddenly be discovered, and their unworthy persons exposed to publick censure: all we say to this is, Let them suffer according to their merits. But notwithstanding these Circumstances, we shall hear of very sober and deliberate Councils and consultations also, about this time concerning matters of no small moment, which have been long controverted and debated, and now near a happy conclusion— News arrive from *Italy*, and we presume to conjecture from *Rome* it self, of some late accidental confection amongst those people: But the people of *Scotland* remain moderately quiet, and do endeavour (at least in pretence) to perform very honourable things, which some little time will discover, and farther explain the intent of their late proceedings and actions— *Difficilia quæ pulchra*——

February hath xxvii days.

28	c	Shrove-Tuesday. ☾ 3 8 V.

Note that the place of ☾ in these left hand Pages is taken from an Ephemerides Calculated from New Tables for Bononia in Italy, and reduced to the Meridian of London.

Malæ causa est, quæ requirit Misericordiam.

EVery man for himself and God for us all: We may justly expect this Month, to be sensible (more or less) of the Effects of those notable Configurations and Conjunctions of the *Planets* which happened in the last, but they will be in part alleviated by those in this— Certainly now matters of great consequence are in Agitation, and yet we have a sullen stubborn sort of people amongst us that swell with malice and most inveterate conceptions, who labour hard and take much pains to procure their own ruine and destruction; these are the persons that are unwilling to obey but must never expect to Command: God grant a right understanding amongst us, and give us Loyal hearts and sound resolutions to Unity, till then there is (or will be) small hopes of happiness. But now or very near this time very superlative Actions are apparent amongst our Superiours, all tending to future concord and harmony, and in order thereunto many Addresses are made, and some eminent Agent, Missive, or Ambassador is very active, so that the weighty Consultations of this Month may end (we hope) to good purpose and to the genetal satisfaction of the whole Nation.— Some worthy and deserving persons are (either now or) very near preferment— The visible *Eclipse* of the *Moon* this Month will not have any apparent or considerable operation untill the next, and the Month ends with very pleasing News in the general— but *Omnium rerum vicissitudo est.*

30	e	Moon sets 23 min. past 8 afternoon.
31	f	Moon sets at 33 min. past 9 afternoon. ☾ 18 10 V.

Habet suum venenum blanda Oratio.

NOrable Debates and Disputations in (or concerning) publick Affairs begins the Month, and yet they leave but very small impression behind. We may now expect an appearance of the Effects of the last *Lunar Eclipse* in the Sign *Virgo*, at least it may put forward the effects of those late lesser Conjunctions and Configurations of the Planets, and I may say the *Comet* too—But *Carrus* says no *Eclipse* of it self can signify want, scarcity, Pestilence or such like accidents to be general to the whole world; because those accidents signified by *Eclipses*, cannot last above four years: and *Naibed* writes, their Effects seldom exceed two years and an half—But in short an *Eclipse* of the *Moon* in the first decanate of *Virgo*, denotes sickness unto Kings and persons in great power; it also portends many Discords and Dissentions, frequently raging amongst men in those places, principally that are under the Dominion of the said *Eclipse*, of which see more in the preceeding Astrological Judgments—But during this Month we may expect to hear of very bold Discourses either by tongue or Pen, and a sudden dissimulation or general repining among the people in many parts of this Kingdom, who pretend tender Consciences and great sufferings for their Religion sake; others are as much possessed with a general fear of a raging Dissemper that may destroy them, and know not where to secure themselves from the danger thereof: so that we are frequently in perplexity, and very rarely continue in a settled peaceable condition, still complaining, cause or no cause—and it will be so—for we are for one thing to day and another to morrow, so that many amongst us live and dye without coming to any resolution—and we are all too subject to fear. *Latet Angliae in istis.*

27	e	New Moon 9 min. p. 10 in the morning.	
28	f	Moon sets at 40 min. past 8 afternoon.	☾ 21 38 Y.
29	g	Moon sets 49 min. past 9 afternoon.	☾ 22 44 Y.
30	h	Moon sets 48 min. past 10 afternoon.	☾ 23 52 Y.

Qui nescit dissimulare nescit vivere.

Religious disputes and controversies therein, begin to break forth to purpose; this will prove an active Month in earnest, certainly mens minds are now stirr'd up (perhaps by evil spirits) to violent attempts, as Quarrels, Murthers, Duels, popular Tumults, &c. the Quartile of *Saturn* and *Mars* by their influence will put forward such rash Actions and set many hot-headed persons a madding — God preserve us from all contagious Dissemers, or Epidemical Diseases, which at this time there is just cause to fear may unhappily afflict many people in several parts of this Nation, and some other Countries of *Europe*, who must certainly expect to labour under much sorrow and oppression, unless the great God of Heaven be the more merciful — Many fears and jealousies, also a stupid or dull melancholy seems to possess the generality of men, both at home and abroad, and yet some of the Long-robe are advanc'd and much honour'd whilst other persons of no mean Quality labour under direful Accusations, and their honour and grandeur most strangely eclipsed: We hope Justice and Equity may prevail: *Mars*, *Venus* and the *Sun*, in Sextile to *Jupiter* promise well, and may in a great measure mitigate the aforesaid Evils — Let us not be wise to deceive our selves; *Q. od super nos, nihil ad nos.* Pleasing News from several parts of *Europe* may arrive towards the end hereof, and the general Affairs of this Month end much more hopefully than they began — *Est quedam doloris voluptas.*

May hath xxxi days.

1	b	May=hap, or Isaiah and Jacob. ♀ 25 3 V.
2	c	Sun rises 21 min. past 4, sets 39 past 7.
3	d	Term begins. ♀ in 27 32 Aries.
4	e	First Quarter 29 min. past 3 in the morning.
5	f	Moon sets 47 min. past 2 mane. 0 10
6	g	Moon sets 6 min. past 3 mane. 1 32
7	h	Moon sets 23 min. past 3 mane. 2 57 ♀ in ♄.
8	b	Days lengthned 8 hours. 4 25
9	c	Moon sets 15 min. past 4 mane. 5 54
10	d	Sun rises 10 min. past 4, sets 50 min. past 7.
11	e	Full Moon 17 min. past 10 in the morning.
12	f	Moon rises 21 min. past 8 afternoon. ♀ 9 2 ♄.
13	g	Moon rises 7 min. past 9 afternoon. 12 19.
14	h	Moon rises 51 min. past 9 at night. 14 2.
15	b	Moon rises at 42 min. past 10 at night. 15 45.
16	c	Moon rises 23 min. past 11 at night. 17 32.
17	d	Moon rises 50 min. past 11 at night. 19 23.
18	e	Moon rises 12 min. past midnight. 21 14.
19	f	Last Quarter 49 min. past 11 in the morning.
20	g	Sun rises 55 min. past 3, sets 5 min. past 8.
21	h	Waggon Sunday. ♀ 27 2 in ♄.
22	b	Moon rises 18 min. past 2 in the morning. 29 1 ♄
23	c	Days lengthned 9 hours. ♀ 12 II.
24	d	Moon rises 6 min. past 3 in the morning. 3 6 II.
25	e	Holy Thursday. Days about 16 hours 20 m. long.
26	f	New Moon about 7 at night. 7 20
27	g	Moon sets 41 min. past 8 at night. 9 30 ♀ in II.
28	h	Moon sets 34 min. past 9 at night. 11 42
29	b	Charles II. Birth & Resta. And Term ends.
30	c	Moon rises 10 min. past 11 at night. ♀ 16 6 II.
31	d	Moon rises 41 min. past 11 at night. ♀ 18 20 II.

Enluto torquentur & preterito.

WE I, we seem at (at least) to be generally troubled labouring under much discontent, and know not well what to desire to make our selves happy; We are too subject to repine against the Actions of our Superiours and those that are in Authority over us, nor is it possible our Governours should be able to satisfy the desires of every individual person: Let us observe this gentle admonition, To be calm and obedient, and endeavour to protect and promote the Power and Authority that has hitherto preserved us in our just rights and liberties—otherwise we may expect not only severe punishment and correction, but much horror and confusion—*Felix qui potuit rem cognoscere causas*; Happy is he that is able to know the causes of things. Various rumours are spread abroad of some notable transactions lately performed in the East or North-East parts of *Europe*—News upon News now arrives, some very pleasing and others the contrary; scandalous Pamphlets are very frequently dispersed, and many licentious Papers, which may animate the people to passion and Rebellion in many places of this Nation: and this is like to be the Effects of the *Quadrat of Saturn* and *Mercury* from *Fixed Signs* if care be not taken to prevent the danger and ill consequences of such designed Actions—And now let us all with one consent pray for the deliverance of *London* in particular, and all *England* in general from those impending Judgments we have drawn upon our own heads, which the Inferior bodies seem to forewarn or threaten by their powerful influence as they are Heavenly Monitors, and Instruments of the Almighty—The Month ends very hopefully, and now an Ambassador may suddenly be expected—But *Bernardus non vidit omnia*.

JUNES Observations. 1682.

Legem nocens cecidit, fortunam innocens.

Certainly great things may be expected now or near this time, for many (and those considerable) are the Configurations of this Month, being attended with six *Conjunctions* of the *Planets*; four of which are the Superiours with the Inferiours, and may produce (or afford) plentiful matter both for this and the next Months Actions— Now we may expect to hear of weighty Consultations in general from several parts of *Europe*, but the particulars for some time concealed from the publick— *Jucunda vicissitudo rerum*: The change of things some account pleasant— we wish it may prove so. Now projects are secretly carried on, and notable pains and industry is used for the better accommodation and speedy composition of those great differences now under debate— Sudden and unexpected Accusations brought against some person or persons of note; others being conscious of Guilt, abscond or lye dormant. In *Rome* and *Italy*, much discord in those places wherein Councils are convened and met together: Dissatisfied Judgments are active amongst us, and yet the Heavens do still portend Peace and Tranquillity in our Nation— Great Assemblies or Meeting of the Gravest and most Judicious persons in several places of *Europe*, and no less probability there is that many material Controversies are now near a happy and much desired conclusion, and final period— The Conjunction of *Jove* and *Venus* in *Cancer* seems to point out the Marriage of some Noble and very worthy Lady, either in *England* or *Scotland* about the end hereof: and the Conjunction of *Saturn* and *Venus* doth much afflict another— But *Nemo particularia predicat*.

Veritas non querit angulos.

OUR jealousies and fears are not yet at an end, but the least appearance of danger puts us as it were upon the rack. The motion of *Jupiter* out of *Cancer* into *Leo*, and the Conjunction of the *Sun*, both with *Saturn* and *Jupiter* this Month, should be very considerable and worth our observations—for some notable and very remarkable Discoveries of the secret and clandestine Designs of persons of note and eminency are now (or near this time) brought upon the stage, and shamefully detected; and upon that score those persons, of no mean-quality, are discarded and discountenanced, if not make their fatal *Exit*; But others are promoted and advanced to honour, and thus Fortunes Wheel turns round: So that now after various turns and changes, Plots and Sham-Plots, *cum multis alisis*, here is very rational hopes of Unity, or at least a better understanding amongst the people in general than has been some few years past—Now is the time that we may expect to hear of very transcendent Actions in most parts of *Europe*: The weather is hot and sultry, and the Season no less dangerous to Mortals, being very sickly; God preserve our *Metropolis* and the whole Nation from the fury of all Pestilential or other raging Distempers—Many Aged persons leave this world, and those of great Quality too; others of the Long-Robe that have been famous in their generation, both Clergy-men and Lawyers, near about this time receive their last Summons, and patiently retire into the Shades. Lastly, Some new Debates and Controversies arise in Families of great Nobility, and Relations also, which will be long before they find a period, to the great disadvantage of all parties. *Homo Animal querulum*—

AUGUSTS Observations, 1682.

—*Si Populus vult posthac decipi, decipiatur.*

Long have we been in Expectation of better Times — and now several differences in relation to Leagues, Articles, Covenants, &c. appear near a hopeful and long wish'd for Conclusion; we heartily wish it may be so, *necessitas cogit* — And now we may expect the Operation of the last fix *Conjunctions*, whose effects will be apparent this very Month amongst us — Ambassadors or Agents from Foreign Princes make their application to the King of *Great Britain* for Assistance. But in *Italy* we hear of many Dissensions and Molestations that arise amongst the Princes thereof; they are possess'd with many fears and jealousies, and not without just cause — We daily hear of many fair pretensions to Unity amongst us, and here is a seeming-settlement of matters of great moment and home-bred differences, if a malicious party amongst us obstruct not. and thereby frustrate our hopes — Welcome and pleasing Intelligence arrives from sundry parts of *Europe*. May *England* enjoy much happiness is most heartily desired: Many Persons of desert do still meet Preferment, and others that think themselves deserving and take much pains to raise and advance themselves to honourable Places are selected and slighted, and it must and ever will be so — But about this time we are all big with expectation of some novel thing which only time must make manifest; some cry up *Torists*, others *Whiggs*, (as the times now go) and every individual agent is active for the promotion of his own designs, yet the old Proverb will be found most true, that *Honesty is the best Policy* — In fine this Month seems to make a full discovery of what was but in part transacted in the last — *Scotland* and *Holland* too not a little concern'd — God preserve his Majesty of *Great Britain*; long may he live and prosper, and then *Curat Lex*; fiat *Justitia*.

SEPTEMBERS Observations. 1682.

Qui cupit pacem, parat bellum.

E'Very man abounds in his own sense—and plenty of Intelligence (such as it is) is banded up and down to the great disturbance and dissatisfaction of the most serious & honest sort of people. We do yet labour under a very sickly season, and very various are the Transactions of Mundane Affairs all over *Europe*—The three superiour Planets in *Leo*, a regal fixed Sign, do manifest the transendency of those Actions now apparent upon the Stage of the World—Nor is the *Conjunction* of *Mars* with *Saturn* and *Jupiter* to be slighted, for 'tis very significant, and points at *Italy* and *Rome* it self—Now the friendship of one Prince with another begins to decline, and many are the vexations and troubles that will shortly occur both by Sea and Land, yet *England* remains in its perfect splendor and Grandeur, we wish it may, so, long continue—Very notable are the *Configurations* of this Month, and doubtless as remarkable will the *Actions* of this and some succeeding Months be; for now men will be more than ordinarily Active, and be ready to fall into heats and passion—Now again we may expect *Clamours* and fresh *Accusations* urged against some principal man or men, and their former Actions called in question and dispu'd—Let those that are Guilty of Treasonable or other Criminal Offences secure and defend themselves as well as they can—Some fear an approaching *Catastrophe* too near us; some are censured, others enlarged: A new *Plot* perhaps discours'd of about this time, let the Agents look to it, their projects will fail, and their fraud be plainly discover'd to their perpetual shame and dishonour—Great are the Councils and Consultations of this Month. God direct our Superiours, or Representatives, in the management of those weighty Affairs that are now before them—Blessed are the Peace-makers. *Plot to be seen*—

31	c	Moon sets 16 min. past 2 mane. 10 58.	

OCTOBERS Observations. 1682.

A signus Cæ's noise to us.

Y Ear after year now have we been in an unhappy *Confermation* amongst our selves; we hope by this time we may see the end thereof— for the World will shortly begin to grow weary of their former Actions, and many great persons will endeavour a reformation of thole grand Irregularities at this time complain'd of, not only in *England* but in several places of *Europe*, and more especially in the Eastern parts thereof; whence a Month of much business may be expected, and many considerable Matters controverted therein. Were we in *England* but sufficiently sensible of our own happiness and of the Peace and plenty we do enjoy, notwithstanding all *Plots* and *Counter-Plots* which have been carried on of late years amongst us, (from which we have been so miraculously delivered and still preserv'd) I say, were we truly sensible of what we enjoy beyond some of our Neighbour Nations, we should be more thankful and admire Divine Providence, and more cheerfully and willingly pay Obedience (as in duty we are bound) to our Superiours, and Loyalty in particular to his most Gracious Majesty, whom God preserve with a long and prosperous Reign, *Amen*— This Month is attended with a Famous *Conjunction* of the two *Superior Planets* in that *regal Sign Leo*, and therefore we may upon good grounds predict that it will (in a natural way) promote *Monarchy* amongst us, and advance the Prerogative of Princes: such a Congress elevates the power of the Magistrate and Authority of many Courts to a very considerable degree. It portends in general terms, Tranquillity to *England*— In fine, many Conventions of grave and sober persons do now or near this time Assemble themselves together to Consult of very weighty matters; God direct them in their great endeavours, and still preserve our Nation— from all Foreign Enemies and Domestick Traitors, &c.— *Fit pœtia, vivat Rex.*

November hath xxx days.

1	d	All Saints. Sun rises 34 min. p. 7, sets 26 m. p. 4.
2	e	All Souls. ☾ is in 13 12 of ♄.
3	f	Moon sets 40 min. past 5 mane. 14 14 } ♄.
4	g	Moon sets 55 min. past 6 mane. 15 12 } ♄.
5	h	Full Moon 35 m. p. 3 morn. ☀ = Potoder = Treaf.
6	b	Moon rises 5 min. past 5 afternoon. 16 56.
7	c	Moon rises 50 min. past 5 afternoon. 17 42.
8	d	Moon rises 58 min. past 6 afternoon. 18 23.
9	e	Days 8 hours and a half long. ☾ 18 58 ♄.
10	f	Sun rises 48 min. past 7, sets 12 min. past 4.
11	g	Moon rises 27 min. past 10 at night. 19 42.
12	h	Last Quarter 41 min. past midnight.
13	b	Days shortned 8 hours. ☾ 19 48 ♄ R.
14	c	Moon rises 55 min. past 1 mane. 19 39.
15	d	Moon rises 4 min. past 3 mane. 19 20.
16	e	Moon rises 19 min. past 4 mane. 18 50.
17	f	Moon rises 33 min. past 5 mane. 18 9.
18	g	Moon rises 45 min. past 6 mane. 17 17.
19	h	New Moon 22 min. past 3 in the morning.
20	b	Sun rises at 8, sets at 4. ☾ 15 3. R. in ♄.
21	c	Moon sets 14 min. past 6 afternoon. 13 46.
22	d	Moon sets 9 min. past 7 afternoon. 12 22.
23	e	Days shortned 8 hours and a half. ☾ 10 56 R.
24	f	Moon sets 4 min. past 9 afternoon. 9 32.
25	g	Moon sets at 6 min. past 10 at night. 8 12.
26	h	Moon sets 3 min. past 11 at night. 7 0.
27	b	First Quarter 17 min. past 4 in the morning.
28	c	Term ends. ☾ 4 59. R. in ♄.
29	d	Moon sets at 5 min. past 2 mane.
30	e	St. Andrew Apostle. ☾ 4 41 ♄.

Justum Bellum quibus necessarium.

WE may justly fear very unreasonable whether about the beginning hereof, which may prove of bad consequence, and very prejudicial to the Country Farmer at Land, and the careful Mariner at Sea——whence Rumours of considerable loss thereby, *viz. Shipwrecks* (as well as by *Pyracies*) and such like Casualties——But this is not all, for some grand Robberies, and perhaps private Duels too salute our ears, and very notable stickling between some persons of no mean Quality amongst us——Yet much better News will present before the Month ends, for the Consultations herein run very high and significant——and the minds of the people in general big with expectation of very great matters suddenly to break out——which should be the advancement of deserving persons to Honour, others are accused of horrid Crimes, and unexpectedly surprized therewith. The influence of the Conjunction of *Saturn* and *Jupiter* operates very slowly as yet, much may be expected when they are somewhat separated, *viz.* the Death of many Aged men, with very signal News from *Italy*, for that Country is in particular menaced; if it be under *Leo*, as the Ancients do affirm; and if so his *Holiness* will find himself strangely uneasy, which will be worth the observation of the Curious, and such as have not faith enough to believe *Starry influences*. Notable Disputes in *Religious matters*, to little purpose——every one endeavours to promote his own interest, *ut Caelum aut nihil*, yet we wish that Justice and Equity may prevail. Many *scandalous Pamphlets* infect the City, and the Month concludes with very uncertain Intelligence from many Countries in *Europe*——*Nihil timendum*——

December 1682.

The Lunar Aspects.

[illegible]

December hath xxxi days.

1	f	Sun rises 10 min. after 8, sets 50 min. past 3.	
2	g	Moon sets 34 min. past 5 mane. ☾ 3 7 ♀ R.	
3	A	Advent Sunday. ☾ 3 14 Diriff.	
4	b	Full Moon 7 min. past 5 afternoon.	
5	c	Moon rises 28 min. past 4 afternoon.	} P. M.
6	d	Moon rises 32 min. past 5 afternoon.	
7	e	Moon rises 56 min. past 6 afternoon.	
8	f	Moon rises at 8 at night. ☾ 5 18 ♀.	
9	g	Days shortned 8 hours 45 min. ☾ 6 18 ♀.	
10	A	2 Advent. Sun rises 13 m. after 8, sets 47 m. past 3.	
11	b	Last Quarter 37 min. past 8 in the morning.	
12	c	Moon rises 6 min. past 1 mane. ☾ 9 8 ♀.	
13	d	Lucia Virg. ☾ 10 12 ♀.	
14	e	Moon rises 12 min. past 3 mane. 11 18.	
15	f	Moon rises 26 min. past 4 mane. 12 29.	
16	g	Moon rises 26 min. past 5 mane. 13 41.	
17	A	3 Advent. Moon rises at 34 m. p. 6 morn. 14 55.	
18	b	New Moon 32 min. past 8 at night. 16 12.	
19	c	Moon sets at 50 min. past 4 afternoon. 17 30.	
20	d	Ember Week. Sun rises 9 m. after 8, sets 51 m. p. 3.	
21	e	St. Thomas Apost. Moon sets at 5 ^h 35' P.M. 20 10.	
22	f	Moon sets at 39 min. past 7 at night. 21 30.	
23	g	Moon sets at 28 min. past 8 at night. 22 52.	
24	A	4 Advent. Moon sets 38 m. p. 9 at night. 24 15 ♀.	
25	b	Feast of Christ, or vulgarly, Christmas Day.	
26	c	St. Stephen Mart. First Quarter 20 m. p. midn.	
27	d	St. John Evangelist. Days lengthened 15 min.	
28	e	Innocents. Moon sets at 45 m. p. 1 mane. 29 57.	
29	f	Moon sets at 56 min. past 2 mane. ☾ 1 24 ♀.	
30	g	Moon sets at 6 min. past 4 mane. 2 53 ♀.	
31	A	Moon sets at 21 min. past 5 in the morning.	

DECEMBERS Observations. 1682.

Omnia propter bonum, homo propter Deum.

LET us not torment our selves with vain fears and jealousies, but earnestly pray for the long Life and happy Reign of our Sovereign; and then we cannot reasonably do amiss—The many benevolent Aspects of the *Planets* amongst themselves this Month promise us much harmony in the midst of the greatest Discord—Amongst the rest we may expect to hear very pleasing Intelligence from abroad, and at this time little or nothing of ill consequence at home; some persons are slenderly advanced, others (and those not so well qualified) honourably preferr'd: and thus Fortunes Wheel goes round—Some without cause complain for the want of Trade or Monies, others are resolv'd to take no thought for to morrow—The Merchant that ventures his Estate in the wide Ocean is promised hopeful returns about this time and blame him not to be chearful in expectation thereof: Indeed here appears much more of Honey than Gall this Month—if we do resolve to let reason and prudence be our guide, we need not now complain: things do (for a time at least) present themselves moderately well, therefore we say, Are any persons troubled now? let them thank themselves—Let the Factionous spirits receive their rewards—if their Religion please them not this Year, they may seek a new way to steer their course the next—All we shall say to conclude the year is only this, *God of his goodness direct the whole Nation unto Unity, Love, Peace amongst themselves, Obedience and Loyalty unto their Sovereign.* Amen.

Advertisements.

THe true *Elisir Proprietary*, and its perfect use in most Diseases, viz. Gripping of the Guts, small Pox, measles Feavers, Wind and Vapours, &c. is composed and sold at the sign of the *Van Helmont* in *Hyden-yard* in the *Mitre* against *Hyden House*; also at *Mr Robert Horn's Shop* at the South entrance of the *Royal Exchange*; at *Mr Robert Harfords* at the *Angel* in *Conhill*; at *Mr Hancock's* at the three *Bibles* in *Pope-head-alley*; at *Mr Brewster's* at the *Crown* in *St Pauls Church-yard*; at *Mr Playfords* Stationer in the *Temple*; at *Mr Lawds* Stationer against *Exeter House* in the *Strand*; at *Mr Gavells* at the *Faulcon* in *Windsor-hall*; at *Mr Cooks* at the *Taberna Rowel* and *Spur* at the corner Shop in *Lincolns-Inn-fields* near *Taverner-alley*, *Walborn*. All persons are desired to be careful they buy not the Counterfeit, the best is only to be had at the places above mentioned, and no where else: With a printed Book of its virtues, and directing fully how to take it.

BUCKWORTH'S LOZENGES, famous for the Cure of Coughs, Colds, Catarrhs, Hoarseness, &c. Being also a great Expectorant and a Sovereign Preservative against all contagious Distempers, Malignant Air, and unwholesome weather; well approved of by the chief Physicians of the Colledge, to whom the true Receipt hath been communicated by the Publisher hereof; are now more faithfully prepared than since the Authors Decesse, and are Licensed for publick use and benefit, by Sir John Micklethwait President of the said Colledge, *London*. Being rightly prepared only by *James Ship-ton* Apothecary, at the *Crown* in *Hutton-Garden*.

THose highly approved, and only true Spirits of Scurvy-Grass, both *Plain* and *Golden*, famous for their admirable Cures in the Scurvey, Dropsie, and several other general Distempers, are exactly and faithfully prepar'd, and sold by the first Author, *Robert Bateman*, at his Houle in *Pauls Church*, near *Dockers Commons, London*; with printed Directions for their use. The Bottles are seal'd with his Coat of Arms, *The Half Moon and Ermine*, to prevent Counterfeits. Price one Shilling each Bottle. These are the true Spirits notwithstanding all the late pretenders therunto: Therefore let all persons beware they are not cheated with those upstarts.

All

Advertisements.

ALL sorts of *Chymical Preparations* are faithfully prepared without the least *Sophistication* or *Adulteration*, and to be sold at reasonable rates by *Christopher Pack* Chymist at the *Globe* and *Furnaces* in the *Postern*, by *Mort-gate*, where a Catalogue may be had *gratis*.

Since the Decease of *Dr. Lockier*, his Famous Universal Pill, which hath been so successful in the Cure of Fevers, Agues, Surfeits, Stone, or any outward pains or weakness, or inward Distemper, is only prepared, according to his appointment, by his Trustees, *John Watts*, his Nephew, in *St. Thomas's Southwark*, and *Tho. Fyge*, Apothecary, without *Bishops-gate*, London, and none other.

Those most excellent Pills and choice Cordial Drink that hath so miraculously brought Health to the Bodies of Men, Women, and Children, in Curing most Diseases incident to them; As the Stone in the Bladder, Surfeits, Ptoisick, Droppe, Gout, Gripping in the Guts, Stone, or Gravel in the Kidneys, Scurvey, &c. are now made publick by *Dr. WOODWARD*, and sold at his House in *Horse-Shoe-Court* in *St. Clements-Lane*, near *Clare-Market*.

Physick and Chyrurgery, professed and practised with good success, by *Ralph Michel* at *Epsom* in the County of *Surrey*, also on Market-days he may be found publick at *Guilford*, *Darling*, and *Chertsey* in the same County by those that have occasion to use him.

Ruptures or Broken Bellies. No Cure no Money, until two Months after you be well. But for Trusses you may have them of all sorts easie. None such made in *England* as these be. Found by Experience in other Countries, as well as in *England*. By *John Reve* at the *Naked-Boy* on the Ditch-side by *Fleet-Bridge* from Nine to Twelve. The Afternoon at the Bell in *St. Joannis Court* in *Clarkinwel Parish*. His Advice for nothing.

THE Compleat Midwives Practice; Newly reprinted with divers Cuts, and Additions. Sold by *O. Blagrave* at the Bear in *St. Paul's Church-Yard*.

F I N I S.

*Books sold by Obadiah Blagrave at the Bear in St.
Paul's Church-Yard.*
